||Jai Sri Gurudev||

Sri Adichunchanagiri Shikshana Trust (R.)

SJC INSTITUTE OF TECHNOLOGY

An Autonomous Institution under VTU from 2024-25

AICTE Approved, Accredited by NAAC with A+ Grade & NBA (CSE, ISE, ECE, ME & CV), NIRF(151-300) in 2023,Gold Rated by QS I-Gauge

P.B. No.20, B.B Road, Chikkaballapur - 562 101, Karnataka

Estd : 1986

III Semester
Scheme & Syllabus of B.E. Programme
Artificial Intelligence & Data Science
(2024 Scheme)

Core Values

Spiritual, **J**udicious, **C**ommitment, **I**ntegrity, **T**rustworthy

NATIONAL INSTITUTIONAL RANKING FRAMEWORK 151-300

NAAC A+

QS I-GAUGE GOLD

INSTITUTION'S INNOVATION COUNCIL (Ministry of HRD Initiative) 4-Star Rating

SJC INSTITUTE OF TECHNOLOGY, CHIKKABALLAPURA

An Autonomous institution Under VTU from 2024 – 2025

AICTE Approved, Accredited by NBA(CSE, ISE, ECE, ME, CV, AE) and NAAC with 'A+' grade, QS – I Gauge Gold Rated

SCHEME OF TEACHING AND EXAMINATION – B.E. – Artificial Intelligence & Data Science

(Applicable for students admitted from the Academic Year 2024-25 and onwards)

III Semester

Sl. No.	Course Code	Course Title	Course Type	TD/ PSB	Teaching Hours / Week			Examination

Engineering Science Course (ESC/ETC/PLC) (Note- Student should opt for the course which should not be similar to the course opted in 1st Year)

Course Code	Course Name	Course Code	Course Name
BCI306A	Object Oriented Programming with Java	BCS306C	Web Application Development with HTML and PHP
BAD306B	Python Program for Data Science	BCS306D	Unix and Shell Programming

Ability Enhancement Course/Skill Enhancement Course – III

Course Code	Course Name	Course Code	Course Name
BAD308A	Data Analytics with Excel	BAD308C	Project Management with Git
BAD308B	Data Analytics with R	BCI308D	Data Visualization with Python

Professional Core Course (IPCC): Refers to Professional Core Course Theory Integrated with practicals of the same course. Credit for IPCC can be 04 and its Teaching– Learning hours (L : T : P) can be considered as (3 : 0 : 2) or (2 : 2 : 2). The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from the practical part of IPCC shall be included in the SEE question paper. For more details, the regulation governing the Degree of Bachelor of Engineering (B.E.) 2024-25 may please be referred.

National Service Scheme /Physical Education/Yoga/Music: All students have to register for any one of the courses namely National Service Scheme (NSS), Physical Education (PE)(Sports and Athletics), Yoga and Music with the concerned coordinator / teacher of the course during the first week of 3rd semester. Activities shall be carried out between 3rd semester to the 6th semester (for 4 semesters). Successful completion of the registered course and requisite CIE score is mandatory for the award of the degree. The events shall be appropriately scheduled by the colleges and the same shall be reflected in the calendar prepared for the NSS, PE, Yoga and Music activities. These courses shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the course is mandatory for the award of degree.

Semester: III						
Probability and Statistics **Stream: CSE** **Common Course For (CSE, ISE, AI&ML, AI&DS, CSD)**						
Course Code	**:**	**BMATS301**		**Credits**	**:**	4
Hours/Week (L:T:P)	**:**	3:2:0		**CIE**	**:**	50 Marks
Total Hours	**:**	50 Hrs		**SEE**	**:**	50 Marks
Course Type	**:**	ASC		**SEE Duration**	**:**	3 Hours

Prerequisites:	
Courses	Basic Mathematics
Knowledge on Fundamental Concepts	Basic differentiation and Integration
Knowledge on Connected Tools (If any)	Basic computer knowledge

Course Learning Objectives: This course will enable the students to	
CLO1	Find the association between attributes and the correlation between two variables
CLO2	Introduce the concept of random variables, probability distributions, specific discrete and continuous distributions with practical application in Computer Science Engineering and social life situations.
CLO3	Provide the principles of statistical inferences and the basics of hypothesis testing with emphasis on some commonly encountered hypotheses.
CLO4	Determine whether an input has a statistically significant effect on the system's response through ANOVA testing.
CLO5	Find the association between attributes and the correlation between two variables

MODULE- 1	**10 Hrs**
Curve fitting and Statistical Analysis: Curve fitting by method of least squares: y = ax+b, y = ax^2 +bx+c and y= ab^x , Correlation–Karl Pearson's coefficient of correlation, Rank correlation and Regression analysis – lines of regression (without proof)- problems. **Self-study:** Curve fitting by method of least squares: y= ae^{bx}, ax^b. **Applications:** Multiple regression in performance tuning and optimization in software engineering. **Text book 2: Ch** 11: 11.1 - 11.3, **Ch** 12	
MODULE- 2	**10 Hrs**
Probability Distributions-1: Random Variables (Discrete and Continuous). Probability mass and density functions. Mathematical expectation, Mean and variance. Discrete probability distributions: Binomial, Poisson, and Normal distributions (derivations for mean and standard deviation for Binomial and Poisson distributions only)-Illustrative examples. **Self-study:** Exponential distribution. **Applications:** Analyse the performance of the algorithms. **Text book 1: Ch** 4: 4.1-7.4.1 , **Ch** 5: 5.1 - 5.4	

MODULE-3	10 Hrs
Probability Distributions-2: Joint Probability distribution for two discrete random variables, expectation, covariance, correlation coefficient. Stochastic process: Stochastic processes, probability vector, stochastic matrices, fixed points, regular stochastic matrices, Markov chains, higher transition probability-simple problems. **Self-study:** Joint Probability distribution for two continuous random variables **Applications :** Rank web pages based on their importance. **Text book 2: Ch** 3: 3.1-3.4, **Ch** 5: 5.2-5.5	
MODULE-4	**10 Hrs**
Sampling Theory: Introduction, sampling distribution, standard error, Type-I and Type-II errors. Testing of hypothesis, levels of significance, confidence limits, test of significance for large samples for mean and proportions. test of significance for small samples - Students 't' distribution, Chi-square distribution as a test of goodness of fit. **Self-study:** sampling of attributes, F-distribution. **Applications:** Data analysis and Cryptography. **Text book 2: Ch** 1: 1.1-1.2, **Ch** 6: 6.7, **Ch** 8: 8.1-8.6, **Ch** 10: 10.1-10.8	
MODULE-5	**10 Hrs**
Design of Experiments & ANOVA: Principles of experimentation in design, The ANOVA Technique, Basic Principle of ANOVA, One-way ANOVA, Two-way ANOVA, Latin-square Design. **Self-study:** Analysis of completely randomized design, randomized block design. **Applications:** Comparison of algorithm performance. **Text book 3: Ch** 1- **Ch** 5	

Course Outcomes: After completing the course, the students will be able to	
CO1	Analyze data using correlation and regression techniques. And **Apply** the principles of least squares to perform curve fitting
CO2	Utilize probability distributions and random variable concepts to model and simulate uncertainties in engineering systems such as atmospheric turbulence.
CO3	Apply the notion of a discrete-time Markov chain and n-step transition probabilities to solve the given problem
CO4	Apply statistical inference techniques including hypothesis testing, error analysis,
CO5	Develop the knowledge of experimental design and perform statistical analysis using ANOVA techniques

Semester: III					
Digital Design & Computer Organization					
Course Code	**:**	BCS302	**Credits**	**:**	4
Hours/Week(L:T:P)	**:**	3:0:2	**CIE**	**:**	50 Marks
Total Hours	**:**	40 Hrs +12 Hrs	**SEE**	**:**	50 Marks
Course Type	**:**	IPCC	**SEE Duration**	**:**	3 Hours

Prerequisites:	
Courses	Basic Electronics Engineering
Knowledge on Fundamental Concepts	Understanding of number systems, Boolean algebra, logic gates.
Knowledge on Connected Tools (If any)	

Course Learning Objectives: This course will enable the students to	
CLO1	Demonstrate the functionalities of binary logic system
CLO2	Explain the working of combinational and sequential logic system
CLO3	Realize the basic structure of computer system
CLO4	Illustrate the working of I/O operations and processing unit
CLO5	Implement efficient arithmetic operations

Module – 1	**08Hrs**
Introduction to Digital Design: Binary Logic, Basic Theorems And Properties Of Boolean Algebra, Boolean Functions, Digital Logic Gates, Introduction, The Map Method, Four-Variable Map, Don't-Care Conditions, NAND and NOR Implementation, Other Hardware Description Language – Verilog Model of a simple circuit. **Text book 1: Ch. 1:**1.9, **Ch. 2:** 2.4, 2.5, 2.8, **Ch. 3:** 3.1, 3.2, 3.3, 3.5, 3.6, 3.9	
Module – 2	**08Hrs**
Combinational Logic: Introduction, Combinational Circuits, Design Procedure, Binary Adder-Subtract or, Decoders, Encoders, Multiplexers. HDL Models of Combinational Circuits – Adder, Multiplexer, Encoder. **Sequential Logic:** Introduction, Sequential Circuits, Storage Elements: Latches, Flip-Flops. **Text book 1: Ch. 4:** 4.1, 4.2, 4.4, 4.5, 4.9, 4.10, 4.11, 4.12, **Ch. 5:** 5.1, 5.2, 5.3, 5.4.	
Module – 3	**08Hrs**
Basic Structure of Computers: Functional Units, Basic Operational Concepts, Bus structure, Performance – Processor Clock, Basic Performance Equation, Clock Rate, Performance Measurement. Machine Instructions and Programs: Memory Location and Addresses, Memory Operations, Instruction and Instruction sequencing, Addressing Modes. **Text book 2: Ch. 1:** 1.2 to 1.4, 1.6, **Ch. 2:** 2.2, 2.3 to 2.5	
Module – 4	**08Hrs**
Input/output Organization: Accessing I/O Devices, Interrupts – Interrupt Hardware, Enabling and Disabling Interrupts, Handling Multiple Devices, **Direct Memory Access:** Bus Arbitration, Speed, size and Cost of memory systems. Cache Memories – Mapping Functions.	

Text book 2: Ch. 4: 4.1, 4.2.1, 4.2.2, 4.2.3, 4.4, **Ch. 5:** 5.4, 5.5.1

Module – 5	**08Hrs**
Arithmetic: Addition and subtraction of signed numbers, Design of fast adders, Multiplication of positive numbers, signed – operand multiplication, fast multiplication. **Text book 2: Ch. 6:** 6.1 to 6.5	

PRACTICAL COMPONENT OF IPCC

Sl.NO	Experiments Simulation packages preferred: Multisim, Modelsim, PSpice or any other relevant
1.	Given a 4-variable logic expression, simplify it using appropriate technique and implement the same using basic gates.
2.	Implement Binary– Half and Full Adder, Half and Full Subtractor. using basic gates
3.	Design Verilog HDL to implement simple circuits using structural, Data flow and Behavioural model.
4.	Design Verilog HDL to implement Binary Adder-Subtractor – Half and Full Adder, Half and Full Subtractor.
5.	Design Verilog HDL to implement Decimal adder.
6.	Design Verilog program to implement Different types of multiplexer like 2:1, 4:1 and 8:1.
7.	Design Verilog program to implement types of De-Multiplexer.
8.	Design Verilog program for implementing various types of Flip-Flops such as SR, JK and D.

Course Outcomes: After completing the course, the students will be able to	
CO1	Recall and define the fundamental concepts of digital design, computer organization components.
CO2	Explain the working principles and basic theorems of digital design and the purpose of memory and I/O organization in digital systems.
CO3	Apply Boolean algebra and K-map techniques to simplify logic expressions, for the construction of combinational circuits.
CO4	Analyze the structure and performance of digital systems to determine their operational effectiveness.
CO5	Evaluate, compare and recommend optimized solutions in various applications of digital design and computer operations.

Semester: III						
Principles of Data Science						
Course Code	:	**BAD303**		**Credits**	:	4
Hours/Week(L:T:P)	:	3:0:2		**CIE**	:	50 Marks
Total Hours	:	40 Hrs +12 Hrs		**SEE**	:	50 Marks
Course Type	:	IPCC		**SEE Duration**	:	3 Hours

Prerequisites:	
Courses	Introduction to Python Programing
Knowledge on Fundamental Concepts	Data types, List, Tuple, Dictionary, Sets, Control Statements
Knowledge on Connected Tools (If any)	Jupyter Notebook

Course Learning Objectives: This course will enable the students to	
CLO1	Fundamental knowledge of data science concepts, techniques, and tools.
CLO2	Understanding of statistical, probabilistic, and machine learning foundations in data-driven applications.
CLO3	Familiar with data preprocessing, analysis, and visualization techniques using Python.
CL04	Exposure to algorithms for classification, regression, and neural networks in solving data science problems.
CLO5	Insight into the practical implementation of data science methods

Module – 1	**08Hrs**
Introduction to Data Science: Describing Data science , The data science Venn diagram, Python for Data Science , Data science case studies **Types of Data**: structured versus unstructured data, quantitative versus qualitative data, the four levels of data: nominal, ordinal, interval and ratio Total information awareness, Bonferroni's Principle, Rhine's paradox. **The Data Science Process:** Overview, Defining research goals, Retrieving data, Cleansing, integrating and transforming data, exploratory data analysis, Build the models, Presenting findings. Data Analytics Lifecycle.	
Module – 2	**08Hrs**
Development of Python programs for the concepts of Statistical Hypothesis Testing, p-values, Confidence Intervals, p-Hacking, and Bayesian Test. Development of Python Programs from scratch for concepts of Gradient Descent. Development of Python programs for Estimating the Gradient Descent, Using the Gradient, Choosing the Right Step Size, and Using Gradient Descent to Fit Models.	

Module – 3	**08Hrs**
Correlation Analysis: Types of correlation, correlation coefficient. **Regression Analysis:** Linear Regression: Simple Linear Regression, Multilinear Regression,p-values, Logistic Regression, Multinomial logistic regression, Time-Series Model, Receiver Operating Characteristic	
Module – 4	**08Hrs**
Dealing with missing data: single and multiple data imputation, Entropy based techniques, Monte Carlo and MCMC simulations; **Correcting inconsistent data:** Deduplication, Entity resolution, Pairwise Matching; Fellegi-Sunter Model **Dimensionality Reduction:** Eigenvalues and Eigenvectors of Symmetric Matrices:Definitions, Computing Eigenvalues and Eigenvectors, Finding Eigenpairs by Power Iteration, Eigenvector matrix Principal-Component Analysis:Example, Using Eigenvectors for Dimensionality Reduction, The matrix of distances Singular-Value Decomposition: Definition, interpretation, Dimensionality Reduction Using SVD, Why Zeroing Low Singular Values Works, Querying Using Concepts, Computing the SVD of a Matrix	
Module – 5	**08Hrs**
Data Analytics on Text: Major Text Mining Areas – Information Retrieval – Data Mining – Natural Language Processing NLP) – Text analytics tasks: Cleaning and Parsing, Searching, Retrieval, Text Mining, Part-of-Speech Tagging, Stemming, Text Analytics Pipeline. NLP: Major components of NLP, stages of NLP, and NLP applications.	

Practical Component

Sl.NO	Experiments
1	Write a Python program to classify given data into types: structured/unstructured, quantitative/qualitative, and determine its level (nominal, ordinal, interval, ratio).
2	Implement a simple data science pipeline on a small dataset (load → clean → analyze → visualize → present).
3	Write a Python program to calculate mean, median, mode, variance, standard deviation, and plot histograms for a dataset.
4	Conduct a hypothesis test (e.g., one-sample t-test) on a dataset and interpret results (accept/reject null hypothesis).
5.	Compute the correlation coefficient (Pearson & Spearman) between two variables and visualize with a scatter plot.
6.	Implement simple and multiple linear regression using scikit-learn; compare R^2 scores.
7.	Demonstrate data cleaning techniques (handle missing values with mean/median imputation, remove duplicates, correct inconsistent values).
8.	Apply PCA (Principal Component Analysis) on a dataset and plot the reduced dimensions.
9.	Implement a Bag-of-Words model and calculate TF-IDF scores for a set of documents; visualize word frequency distribution.

Course Outcomes: After completing the course, the students will be able to	
CO1	Understand the fundamental concepts and tools used in data science across all stages of data processing.
CO2	Apply data analytics skills to perform statistical computations, data preprocessing, and model building.
CO3	Analyze data using visualization, statistical inference, and machine learning methods to derive meaningful insights.
CO4	Evaluate the effectiveness of various algorithms using performance metrics.
CO5	Develop data-driven applications and machine learning models to solve real-world problems.

Text Books	
1.	Principles of Data Science Sinan Qzdemir, Sunil Kakade & Macro Tibaldeschi Second Edition 2018
2.	Fundamentals of Data Science Sanjeev Wagh, Manisha Bhende, Anuradha Thakare, 1st Edition, 2022
3.	Introducing Data Science: Big Data, Machine Learning, and More Jure Leskovec, Anand Rajaraman, Jeffrey D Ullman 2nd Manning 2016

Semester: III					
Data Structures and Applications					
Course Code	:	BCS304	**Credits**	:	3
Hours/Week(L:T:P)	:	3:0:0	**CIE**	:	50 Marks
Total Hours	:	40L	**SEE**	:	50 Marks
Course Type	:	PCC	**SEE Duration**	:	3 Hours

Prerequisites:	
Courses	Problem Solving through programming.
Knowledge on Fundamental Concepts	Programming skills
Knowledge on Connected Tools (If any)	Text Editor

Course Learning Objectives: this course will enable the students to	
CLO1	Gain the knowledge of the fundamentals of data structures and their applications.
CLO2	Illustrate representation of Different data structures such as Stack, Queues, Linked Lists, Trees and Graphs.
CLO3	Use linear data structures to design and develop solutions to real world problems.
CLO4	Discuss applications of Nonlinear Data Structures in problem solving.
CLO5	Apply the hashing techniques in mapping key value pairs and Optimal Binary Search Trees.

Module – 1	**08 Hrs**
INTRODUCTION TO DATA STRUCTURES: Data Structures, Classifications (Primitive & Non-Primitive), Data structure Operations, Review of pointers and dynamic Memory Allocation. **ARRAYS and STRUCTURES:** Arrays, Dynamic Allocated Arrays, Structures and Unions, Polynomials, Sparse Matrices, Strings. **Textbook 1: ch.1:1.1 - 1.4** **Textbook 2: Ch.1:1.2, Ch.2: 2.1 - 2.5(2.5.1-2.5.3), 2.7(2.7.1,2,7.2)**	
Module – 2	**08 Hrs**
STACKS: Stacks, Stacks Using Dynamic Arrays, Evaluation and conversion of Expressions, Recursion, Tower of Hanoi. **QUEUES:** Queues, Circular Queues Using Dynamic Arrays, Multiple Stacks and queues. **Textbook 2: Ch.3: 3.1-3.4,3.6,3.7** **Textbook 1: Ch.6: 6.7,6.8**	

Module – 3	**8 Hrs**
LINKED LISTS: Singly Linked Lists and Chains, Representing Chains in C, Linked Stacks and Queues, Polynomials, Additional List Operations, Sparse Matrices, Doubly Linked Lists. **Textbook 2: Ch.4: 4.1 - 4.5, 4.7, 4.8**	
Module - 4	**08 Hrs**
TREES: Introduction, Binary Trees, Binary Tree Traversals, Threaded Binary Trees, Binary Search trees, Selection Trees, Forests, Representation of Disjoint sets, Counting Binary Trees. **Textbook 2: Ch.5: 5.1 - 5.3, 5.5, 5.7 - 5.11**	
Module - 5	**08 Hrs**
GRAPHS: The Graph Abstract Data Type, Elementary Graph Operations. HASHING: Introduction, Static Hashing, Dynamic Hashing. **INTRODUCTION TO EFFICIENT BINARY SEARCH TREES:** Optimal Binary Search Trees. **Textbook 2: Ch.6: 6.1, 6.2, Ch.8: 8.1 - 8.3, Ch.10: 10.1**	

Course Outcomes: After completing the course, the students will be able to	
CO1	Infer the concept of linear and nonlinear data structures.
CO2	Apply array, stack and queue concepts to solve problems.
CO3	Apply linked list concepts to solve real world problems
CO4	Analyze Tree Data Structure to develop solutions for real-world problems.
CO5	Apply graph traversal techniques to search and hashing techniques to organize the data.

Prerequisites:	
Courses	Problem Solving through Programming
Knowledge on Fundamental Concepts	C programming concepts
Knowledge on Connected Tools (If any)	Editor

Course Level Objectives: This course will enable the Students to	
CLO1	Gain the knowledge of dynamic memory management concepts in C
CLO2	Illustrate various Linear data structures and their applications such as stacks, queues and lists
CLO3	Illustrate various Non-Linear data structures and their applications such as trees and graphs
CLO4	Develop problem-solving skills by applying appropriate data structures.
CLO5	Integrate file handling techniques with data structures.

Practical Component:

Sl.NO	**Experiments**
1	Develop a Program in C for the following: a) Declare a calendar as an array of 7 elements (A dynamically Created array) to represent 7 days of a week. Each Element of the array is a structure having three fields. The first field is the name of the Day (A dynamically allocated String), The second field is the date of the Day (A integer), the third field is the description of the activity for a particular day (A dynamically allocated String). b) Write functions create(), read() and display(); to create the calendar, to read the data from the keyboard and to print weeks activity details report on screen.
2	Develop a Program in C for the following operations on Strings. a. Read a main String (STR), a Pattern String (PAT) and a Replace String (REP) b. Perform Pattern Matching Operation: Find and Replace all occurrences of PAT in STR with REP if PAT exists in STR. Report suitable messages in case PAT does not exist in STR Support the program with functions for each of the above operations. Don't use Built-in functions.

3	Develop a menu driven Program in C for the following operations on STACK of Integers (Array Implementation of Stack with maximum size MAX) a. Push an Element on to Stack b. Pop an Element from Stack c. Demonstrate how Stack can be used to check Palindrome d. Demonstrate Overflow and Underflow situations on Stack e. Display the status of Stack f. Exit Support the program with appropriate functions for each of the above operations
4	Develop a Program in C for converting an Infix Expression to Postfix Expression. Program should support for both parenthesized and free parenthesized expressions with the operators: +, -, *, /, % (Remainder), ^ (Power) and alphanumeric operands.
5	Develop a Program in C for the following Stack Applications a. Evaluation of Suffix expression with single digit operands and operators: +, -, *, /, %, ^ b. Solving Tower of Hanoi problem with n disks
6	A food delivery app handles customer orders as they arrive. The orders must be processed in the order they were received, making queue data structure ideal. Design and implement a C program to simulate this system using a Circular queue. Program should have options to add and remove the food orders in appropriate order for their service. (Array Implementation of Queue with maximum size MAX). Include C functions to perform the following operations. a. Add a new food order. b. Delete an older order. c. Display all current orders in queue. d. Demonstrate Overflow and Underflow conditions.

7	A student To-Do Task Manager app allows the students to manage academic Task with member's id, title, dueDate, Category, priority. The facilities to be provided for the users are as follows a. Create a Tasks. b. Add Task to start/end. c. Delete Task from start/end. d. View first/last task. e. Handle empty list conditions Design and Implement a menu driven Program in C for the above operations using Singly Linked List.
8	Develop a menu driven Program in C for the following operations on Doubly Linked List (DLL) of Employee Data with the fields: SSN, Name, Dept, Designation, Sal, PhNo a. Create a DLL of N Employees Data by using end insertion. b. Display the status of DLL and count the number of nodes in it c. Perform Insertion and Deletion at End of DLL d. Perform Insertion and Deletion at Front of DLL e. Demonstrate how this DLL can be used as Double Ended Queue. f. Exit
9	Develop a Program in C for the following operationson Singly Circular Linked List (SCLL) with header nodes a. Represent and Evaluate a Polynomial $P(x,y,z) = 6x^2y^2z-4yz^5+3x^3yz+2xy^5z-2xyz^3$ b. Find the sum of two polynomials POLY1(x,y,z) and POLY2(x,y,z) and store the result in POLYSUM(x,y,z) Support the program with appropriate functions for each of the above operations
10	Develop a menu driven Program in C for the following operations on Binary Search Tree (BST) of Integers . a. Create a BST of N Integers: 6, 9, 5, 2, 8, 15, 24, 14, 7, 8, 5, 2 b. Traverse the BST in Inorder, Preorder and Post Order c. Search the BST for a given element (KEY) and report the appropriate message d. Exit

11	Develop a Program in C for the following operations on Graph(G) of Cities a. Create a Graph of N cities using Adjacency Matrix. b. Print all the nodes reachable from a given starting node in a digraph using DFS/BFS method
12	Given a File of N employee records with a set K of Keys (4-digit) which uniquely determine the records in file F. Assume that file F is maintained in memory by a Hash Table (HT) of m memory locations with L as the set of memory addresses (2-digit) of locations in HT. Let the keys in K and addresses in L are Integers. Develop a Program in C that uses Hash function H: K →L as H(K)=K mod m (remainder method), and implement hashing technique to map a given key K to the address space L. Resolve the collision (if any) using linear probing.

Course Outcomes: After completing the course, the students will be able to	
CO1	Analyze various linear and non-linear data structures
CO2	Demonstrate the working of different types of data structures
CO3	Apply appropriate searching and sorting algorithms for the given scenario.
CO4	Apply the appropriate data structure for solving real world problems
CO5	Design and formulate various methods of organizing data

Semester: III						
Object Oriented Programming with Java						
Course Code	:	**BCI306A**		**Credits**	:	3
Hours/Week(L:T:P)	:	3:0:0		**CIE**	:	50 Marks
Total Hours	:	40 Hrs		**SEE**	:	50 Marks
Course Type	:	ESC		**SEE Duration**	:	3 Hours

Prerequisites:	
Courses	Problem Solving through programming, Introduction to Python Programming.
Knowledge on Fundamental Concepts	Basic understanding of programming logic, data types, control structures, operators, and functions.
Knowledge on Connected Tools (If any)	Linux Editor

Course Learning Objectives: This course will enable the students to	
CLO1	Understand the Object-oriented principles and basic Java constructs
CLO2	Learn the Concepts of inheritance and interfaces for achieving code reusability and polymorphism in Java programs.
CLO3	Gain the knowledge on Modular Java programs using packages along with techniques for handling runtime errors through exception handling.
CLO4	Familiarize the Multithreading and Java language features for building efficient and concurrent applications.
CLO5	Know the String operations using Java classes.

Module – 1	**08 Hrs**

Introduction to Java: Object oriented programming(Two Paradigms, Abstraction, The Three OOP Principles), Using Blocks of Code,, The Bytecode, The Java Buzzwords, and Structure of a Java Program, Data types , The For-Each Version of the for Loop and Arrays.

Introducing classes: Class fundamentals, declaring objects, assigning object reference variables, Introducing methods, Constructors, this keyword, Garbage Collection,.

Methods and classes: Overloading methods, Objects as parameters, argument passing, Returning objects, Access Control, Understanding static, Introducing final, Introducing Nested and Inner Classes.

Text Book 1: Ch.2, Ch.3, Ch.6, Ch.7

Module – 2	**08 Hrs**

Inheritance: Inheritance Basics, Using super, Creating a Multilevel Hierarchy, When Constructors Are Executed, Method Overriding, Dynamic Method Dispatch, Using Abstract Classes, Using final with Inheritance, Local Variable Type Inference and Inheritance, The Object Class.

Interfaces: Interfaces, Default Interface Methods, Use static Methods in an Interface, Private Interface Methods.

Text Book 1: Ch.8, Ch.9

Module – 3	08 Hrs
Packages: Packages, Packages and Member Access, Importing Packages. **Exceptions:** Exception-Handling Fundamentals, Exception Types, Uncaught Exceptions, Using try and catch, Multiple catch Clauses, Nested try Statements, throw, throws, finally, Java's Built-in Exceptions, Creating Your Own Exception Subclasses, Chained Exceptions. **Text Book 1: Ch.9, Ch.10**	
Module – 4	**08 Hrs**
Multithreaded Programming: The Java Thread Model, The Main Thread, Creating a Thread, Creating Multiple Threads, Using isAlive() and join(), Thread Priorities, Synchronization, Interthread Communication, Suspending, Resuming, and Stopping Threads, Obtaining a Thread's State. **Enumerations, Type Wrappers and Autoboxing:** Enumerations (Enumeration Fundamentals, The values () and valueOf() Methods), Type Wrappers (Character, Boolean, The Numeric Type Wrappers), Autoboxing (Autoboxing and Methods, Autoboxing/Unboxing Occurs in Expressions, Autoboxing/Unboxing Boolean and Character Values). **Text Book 1: Ch.11, Ch.12**	
Module – 5	**08 Hrs**
String Handling : The String Constructors, String Length, Special String Operations, Character Extraction, String Comparison, Searching Strings, Modifying a String, Data Conversion Using valueOf( ), Changing the Case of Characters Within a String, joining strings, Additional String Methods, StringBuffer , StringBuilder. **Text Book 1: Ch.16**	

Course Outcomes: After completing the course, the students will be able to	
CO1	Understand the core principles of object-oriented programming and the structure of Java programs.
CO2	Apply the concepts of classes, objects, inheritance, interfaces, packages, and exception handling to build basic applications.
CO3	Analyze the use of multithreading, synchronization, and exception handling to manage program execution and control flow.
CO4	Evaluate the behavior of programs involving strings, enumerations, and wrapper classes for performance and correctness.
CO5	Develop efficient and modular applications using object-oriented principles, libraries, and multithreaded programming constructs.

Python Programming for Data Science						
Course Code	**:**	**BAD306B**		**Credits**	**:**	3
Hours/Week(L:T:P)	**:**	3:0:0		**CIE**	**:**	50 Marks
Total Hours	**:**	40 Hrs		**SEE**	**:**	50 Marks
Course Type	**:**	ESC		**SEE Duration**	**:**	3 Hours

Prerequisites:	
Courses	Introduction to Python Programming.
Knowledge on Fundamental Concepts	Basic Programming Constructs, Mathematical Logics, Problem-solving Skills
Knowledge on Connected Tools (If any)	Jupyter Notebook, Excel/CSV

Course Learning Objectives: This course will enable the students to	
CLO1	Know the basic concepts of Python Programming.
CLO2	Learn the built-in data structures for solving problems.
CLO3	Gain the knowledge of NumPy functions for handling numerical data and performing array-based operations
CLO4	Insights into Pandas library features.
CLO5	Familiarize about Matplotlib and Seaborn libraries for creating and customizing data visualizations.

Module – 1	**08 Hrs**
Introduction to Python and NumPy: Getting Started in IPython and Jupyter, Enhanced Interactive Features, The Basics of NumPy Arrays, Sorted Arrays, Structured Data: NumPy's Structured Arrays **Textbook: Ch 2, Ch 5, Ch 11, Ch 12, Ch 1(Not for CIE/SEE)**	
Module – 2	**08 Hrs**
Data Manipulation with Pandas - I: Introducing Pandas Objects, Handling Missing Data, Hierarchical Indexing, Pivot Tables. **Textbook: Ch 13, Ch 16, Ch 17, Ch 21**	
Module – 3	**08 Hrs**
Data Manipulation with Pandas - II: Vectorized String Operations, Working with Time Series, High Performance Pandas: eval and query **Textbook: Ch 22, Ch 23, Ch 24**	
Module – 4	**08 Hrs**
Data Visualization with MatPlotlib: General Matplotlib Tips, Simple Line Plots, Simple Scatter Plots, Visualization with Seaborn **Textbook: Ch 25, Ch 26, Ch 27, Ch 36**	

Module – 5	08 Hrs
Introduction to Machine Learning: What Is Machine Learning?, Introducing Scikit-Learn, Hyperparameters and Model Validation **Textbook: Ch 37, Ch 38, Ch 39**	

Course Outcomes: After completing the course, the students will be able to	
CO1	Understand the concepts of Python programming, NumPy arrays, and their operations for data handling.
CO2	Apply Pandas functionalities to manipulate, clean, and organize datasets effectively.
CO3	Analyze datasets using advanced Pandas features.
CO4	Evaluate data visualization techniques to represent datasets meaningfully.
CO5	Develop basic machine learning models using data science techniques.

Semester: III					
Web Application Development with HTML and PHP					
Course Code	:	BCS306C	**Credits**	:	03
Hours/Week(L:T:P)	:	2:0:2	**CIE**	:	50 Marks
Total Hours	:	40 Hrs	**SEE**	:	50 Marks
Course Type	:	ESC	**SEE Duration**	:	3 Hours

Prerequisites:	
Courses	Problem Solving using Programming
Knowledge on Fundamental Concepts	Computer Basics, Basic Logic Building, Text Editing Tools, Web and Internet Basics
Knowledge on Connected Tools (If any)	Notepad++

Course Learning Objectives: This course will enable the students to	
CLO1	Understand web programming fundamentals, HTTP, security, and HTML structure.
CLO2	Describe the syntax, structure, elements, and how HTML and XHTML are different.
CLO3	Use CSS to style, arrange, and structure web pages.
CLO4	Explore the role of JavaScript and the DOM in changing how a page looks and behaves.
CLO5	Build server-side programs using PHP along with web server tools.

Module – 1	**08Hrs**
Introduction to WEB Programming: Internet, WWW, Web Browsers, and Web Servers, URLs, MIME, HTTP, Security. Introduction to HTML, what is HTML and Where did it come from? HTML Syntax, Semantic Markup, Structure of HTML Documents, Quick Tour of HTML Elements. **Text Book 1: Ch. 1: 1.1 - 1.8**	
Module – 2	**08Hrs**
HTML and XHTML: Origins of HTML and XHTML, Basic syntax, Standard XHTML document structure, Basic text Markup, Images, Hypertext Links, Lists, and Tables. Forms, Syntactic differences between HTML and XHTML. **Text Book 1: Ch. 2: 2.1 - 2.10**	
Module – 3	**08Hrs**
CSS: Introduction, Levels of style sheets, Style specification formats, Selector forms, Property value forms, Font properties, List properties, Color, Alignment of text, The Box Model, Background images, tags. **Text Book 1: Ch. 3: 3.1 - 3.12**	

Module – 4	08Hrs
JavaScript: What is JavaScript and What can it do? JavaScript Design Principles, Where does JavaScript Go?, Syntax, JavaScript Objects, The Document Object Model (DOM),JavaScript Events. **Text Book 2: Ch. 6: 6.1 - 6.7**	
Module – 5	**08Hrs**
Introduction to Server-Side Development with PHP: What is Server-Side Development, A Web Server's Responsibilities, Quick Tour of PHP, Program Control, Functions, PHP Arrays and Superglobals: Arrays, $_GET and $_POST Super global Arrays, $_SERVER Array, $_Files Array, Reading/Writing Files. **Text Book 2: Ch. 8: 8.1 - 8.5, Ch. 9: 9.1 - 9.5**	

Course Outcomes: After completing the course, the students will be able to	
CO1	Interpret the fundamentals of web programming concepts to build structured web pages.
CO2	Design interactive web pages using HTML and XHTML.
CO3	Develop responsive web pages using CSS.
CO4	Apply JavaScript for dynamic and interactive content.
CO5	Analyze server-side processes to design and optimize PHP applications.

5	Dynamic Documents with JavaScript: https://www.youtube.com/watch?v=HTFSIJALNKc

PRACTICAL COMPONENT:

Sl.NO	Experiments
1.	Develop the HTML page named as "Myfirstwebpage.html". Add the following tags with relevant content. 1. Set the title of the page as "My First Web Page" 2. Within the body use the following tags: a) Moving text = "Basic HTML Tags" b) Different heading tags (h1 to h6) c) Paragraph d) Horizontal line e) Line Break f) Block Quote g) Pre tag h) Different Logical Style (<b>,<u>,<sub>,<sup>etc).
2.	Develop the HTML page named as "Table.html" to display your class time table. a) Provide the title as Time Table with table header and table footer, row-span and col-span etc. b) Provide various colour options to the cells (Highlight the lab hours and elective hours with different colours.) c) Provide colour options for rows.
3.	Develop an external style sheet named as "style.css" and provide different styles for h2, h3, hr, p, div, span, time, img&a tags. Apply different CSS selectors for tags and demonstrate the significance of each.
4.	Develop HTML page named as "registration.html" having variety of HTML input elements with background colors, table for alignment & provide font colors& size using CSS styles.
5.	Develop HTML page named as "newpaper.html" having variety of HTML semantic elements with background colors, text-colors& size for figure, table, aside, section, article, header, footer… etc.
6.	Apply HTML, CSS and JavaScript to design a simple calculator to perform the following operations: sum, product, difference, remainder, quotient, power, square-root and square.
7.	Write a JavaScript that calculates the squares and cubes of the numbers from 0 to 10 and outputs HTML text that displays the resulting values in an HTML table format.
8.	Write a PHP program to display a digital clock which displays the current time of the server
9.	Write a PHP program to keep track of the number of visitors visiting the web page and to display this count of visitors, with proper headings.
10.	Develop a PHP program (with HTML/CSS) to sort the student records which are stored in the database using selection sort.

Semester: III					
Unix and shell programming					
Course Code	:	BCS306D	**Credits**	:	3
Hours/Week(L:T:P)	:	3:0:0	**CIE**	:	50 Marks
Total Hours	:	40 Hrs	**SEE**	:	50 Marks
Course Type	:	ESC	**SEE Duration**	:	3 Hours

Prerequisites:	
Courses	Problem solving through Programming
Knowledge on Fundamental Concepts	Basic OS Concepts, Computer Architecture Basics, programming logic and constructs
Knowledge on Connected Tools (If any)	Text editors Vi, Vim, nano, gedit

Course Learning Objectives: This course will enable the students to	
CLO1	Help the students to understand effective use of Unix concepts, commands and terminology
CLO2	Identify, access, and evaluate UNIX file system.
CLO3	Understand UNIX command syntax and semantics.
CL04	Ability to read and understand specifications, scripts and programs
CLO5	Analyze Facility with UNIX Process.

Module – 1	**08 Hrs**
Introduction of UNIX - Introduction, History, Architecture, Experience the Unix environment, Basic commands ls, cat, cal, date, calendar, who, printf, tty, sty, uname, passwd, echo, tput, and bc. **Textbook 1: Ch 1: 1.1 to 1.4 , Ch 2 :2.1**	
Module – 2	**08 Hrs**
UNIX File System- The file, what's in a filename? The parent-child relationship, pwd, the Home directory, absolute pathnames, using absolute pathnames for a command, cd, mkdir, rmdir, Relative pathnames, The UNIX file system. **Textbook 1: Ch 4**	
Module – 3	**08 Hrs**
Basic File Attributes - Is – l, the –d option, File Permissions, chmod, Security and File Permission, users and groups, security level, changing permission, user masks, changing ownership and group, File Attributes, More file attributes: hard link, symbolic link, umask, find. **Textbook 1: Ch 6**	

Module – 4	08 Hrs
Introduction to the Shell Scripting - Introduction to Shell Scripting, Shell Scripts, read, Command Line Arguments, Exit Status of a Command, The Logical Operators && and **||**, exit, if, and case conditions, expr,sleep and wait, while, until, for, $, @, redirection. The here document, set, trap, Sample Validation and Data Entry Scripts. **Textbook 1: Ch 11, Ch 12, Ch 14**	
Module – 5	**08 Hrs**
Introduction to UNIX System process: Mechanism of process creation. Parent and child process. The ps command with its options. Executing a command at a specified point of time: at command. Executing a command periodically: cron command and the crontab file.. Signals. **Textbook 1: Ch 9,Ch 19**	

Course Outcomes: After completing the course, the students will be able to	
CO1	Understand the basics of Unix concepts and commands.
CO2	Evaluate the UNIX file system.
CO3	Apply Changes in file system.
CO4	Develop shell scripts for automation
CO5	Analyze Facility with UNIX system process

Total Hours	**:**	15	**SEE**	**:**	-
Course Type	**:**	UHV	**SEE Duration**	**:**	-

Course Objectives: This course will enable the students to	
CLO1	Understand and appreciate the importance of environmental sustainability, cultural heritage and traditional practices
CLO2	Apply experiential learning through field visits, case studies and community interaction
CLO3	Develop skills in documentation, reporting and creative presentation through photo blogs or documentaries
CLO4	Demonstrate awareness of organic farming, waste management, water conservation and their implementation in campus or community settings
CLO5	Recognize the significance of indigenous crafts, culinary traditions and their socio-cultural value

Module 1	**3Hrs**
Plantation and adoption of a tree Plantation of a tree that will be adopted for four years by a group of BE / B.Tech students. (ONE STUDENT ONE TREE) They will also make an excerpt either as a documentary or a photo blog describing the plant's origin, its usage in daily life, its appearance in folklore and literature - – Objectives, Visit, case study, report, outcomes. **Text Book1**	
Module 2	**3Hrs**
Heritage walk and crafts corner Heritage tour, knowing the history and culture of the city, connecting to people around through their history, knowing the city and its craftsman, photo blog and documentary on evolution and practice of various craft forms - – Objectives, Visit, case study, report, outcomes. **Text Book2**	
Module 3	**3Hrs**
Organic farming and waste management Usefulness of organic farming, wet waste management in neighboring villages, and implementation in the campus – Objectives, Visit, case study, report, outcomes. **Text Book3**	

Module 4	**3Hrs**
Water conservation Knowing the present practices in the surrounding villages and implementation in the campus, documentary or photoblog presenting the current practices – Objectives, Visit, case study, report, outcomes. **Text Book4**	
Module 5	**3Hrs**
Food walk City's culinary practices, food lore, and indigenous materials of the region used in cooking – Objectives, Visit, case study, report, outcomes. **Text Book5**	

Course Outcomes: After completing the course, the students will be able to	
CO1	Elucidate the significance of tree plantation, cultural heritage, organic farming, waste management, water conservation and traditional food practices
CO2	Demonstrate the ability to plan and execute community-focused environmental and cultural activities
CO3	Prepare and present photo blogs or documentaries to document and communicate findings.
CO4	Apply sustainable practices learned from field visits in campus or community projects
CO5	Appreciate and promote indigenous knowledge, crafts and culinary traditions as part of cultural preservation

Hours/Week(L:T:P)	:	0:0:2		**CIE**	:	50 Marks
Total Hours	:	12 Hrs		**SEE**	:	50 Marks
Course Type	:	AEC		**SEE Duration**	:	2 Hours

Prerequisites:	
Courses	Engineering Mathematics for CSE stream.
Knowledge on Fundamental Concepts	Basic Concepts of Mathematics
Knowledge on Connected Tools (If any)	-

Course Learning Objectives: This course will enable the students to	
CLO1	Familiarize with analysis techniques applied to datasets in Excel.
CLO2	Understand Pivot Tables and Pivot Charts for streamlined workflow in Excel.
CLO3	Know about the key principles and elements related to data analysis.
CLO4	Basic knowledge of Excel functions and techniques used in data analysis
CLO5	Get exposure to the structure and elements of presentation-ready dashboards in Excel.

Sl.No	**Experiment**
1	Getting started with excel: Creation of spread sheets, Insertion of rows and columns, Drag & Fill, use of aggregate functions.
2	Working with Data: Importing data, Data Entry & Manipulation, Sorting & Filtering.
3	Working with Data: Data Validation, Pivot Tables & Pivot Charts.
4	Data Analysis Process: Conditional Formating, What if-analysis, Data Tables, Charts & graphs.
5	Cleaning Data with Text Functions: use of UPPER and LOWER, TRIM function, Concatenate.
6	Cleaning Data containing date and time value: use of DATEVALUE function, DATEADD and DATEDIF, TIMEVALUE function.
7	Conditional Formatting: Formatting, parsing and highlighting data in spreadsheets during data analysis.
8	Working with multiple sheets: Work with multiple sheets within a workbook is crucial for organizing and managing data, perform complex calculations and create comprehensive reports.
9	Create worksheet with following fields: Empno, Ename, Basic Pay(BP), Travelling Allowance(TA), Dearness Allowance (DA), House Rent Allowance(HRA), Income Tax(IT), Provident Fund (PF), Net Pay(NP). Use appropriate formulas to calculate the above scenario. Analyse the data using appropriate chart and report the data.
10	Create worksheet on Inventory Management: Sheet should contain Product code, Product name, Product type, MRP, Cost after % of discount, Date of purchase. Use appropriate formulas to calculate the above scenario. Analyse the data using appropriate chart and report the data.
11	Create worksheet on Sales analysis of Merchandise Store: data consisting of Order ID, Customer ID, Gender, age, date of order, month, online platform, Category of product, size, quantity, amount, shipping city and other details. Use of formula to segregate

	different categories and perform a comparative study using pivot tables and different sort of charts.
12	Generation of report & presentation using Autofilter &macro.
13	Develop a spreadsheet that records student marks across subjects. Use aggregate functions to calculate total, average, and grade distribution. Apply conditional formatting to highlight students scoring below a threshold. Utilize pivot tables for subject-wise performance insights.
14	Develop an Excel-based system to manage patient appointments. Use date functions to calculate waiting times. Apply data validation to ensure correct entry of appointment details.
15	Consider a company salary sheet with the following columns: Employee ID, Name, Department, Basic Salary, Allowances, Deductions, Gross Salary, Net Salary, Tax Deduction, and PF Deduction. Perform the following operations using Excel: a) Calculate Gross Salary and Net Salary using formulas. b) Apply Conditional Formatting to highlight employees earning more than ₹50,000. c) Use Data Validation to restrict negative salary inputs. d) Sort employees by Net Salary in descending order. e) Generate a Pivot Table to display total salary expenses per department. f) Create a Bar Chart showing salary distribution across different departments.

Course Outcomes: After completing the course, the students will be able to	
CO1	Understand the basic features of Excel.
CO2	Apply built-in functions for data manipulation and visualization.
CO3	Analyze large datasets using Excel functions to extract meaningful insights.
CO4	Evaluate the accuracy and effectiveness of data manipulations and transformation techniques in Excel.
CO5	Develop interactive dashboards and automated reports in Excel.

Suggested Learning Sources

Semester: III					
Data Analytics with R					
Course Code	**:**	**BAD308B**	**Credits**	**:**	1
Hours/Week(L:T:P)	**:**	0: 0: 2	**CIE**	**:**	50 Marks
Total Hours	**:**	12 Hrs	**SEE**	**:**	50 Marks
Course Type	**:**	AEC	**SEE Duration**	**:**	2 Hours

Prerequisites:	
Courses	Introduction to Python Programming
Knowledge on Fundamental Concepts	Basics of Data Structures, Mathematical Foundations
Knowledge on Connected Tools (If any)	Linux Editor

Course Learning Objectives: This course will enable the students to	
CLO1	Gain the knowledge of R Programming Concepts.
CLO2	Emphasis the graphical representation of data
CLO3	Explore the concept of Statistics in R
CLO4	Work with R charts and Graphs
CLO5	Focus on data organization, summarization, file interpretation using R environment.

Experiments	
Sl. No.	**List of problems for which student should develop program and execute in the Laboratory**
1.	Demonstrate the steps for installation of R and R Studio. Perform the following: a) Assign different type of values to variables and display the type of variable. Assign different types such as Double, Integer, Logical, Complex and Character and understand the difference between each data type. b) Demonstrate Arithmetic and Logical Operations with simple examples. c) Demonstrate generation of sequences and creation of vectors. d) Demonstrate Creation of Matrices e) Demonstrate the Creation of Matrices from Vectors using Binding Function. f) Demonstrate element extraction from vectors, matrices and arrays
2.	Assess the Financial Statement of an Organization being supplied with 2 vectors of data: Monthly Revenue and Monthly Expenses for the Financial Year. You can create your own sample data vector for this experiment) Calculate the following financial metrics: a. Profit for each month. b. Profit after tax for each month (Tax Rate is 30%). c. Profit margin for each month equals to profit after tax divided by revenue. d. Good Months – where the profit after tax was greater than the mean for the year. e. Bad Months – where the profit after tax was less than the mean for the year. f. The best month – where the profit after tax was max for the year. g. The worst month – where the profit after tax was min for the year.
3.	Develop a program to create two 3 X 3 matrices A and B and perform the following operations a) Transpose of the matrix b) addition c) subtraction d) multiplication
4.	Develop a program to find the factorial of given number using recursive function calls.
5.	Develop an R Program using functions to find all the prime numbers up to a specified number by the method of Sieve of Eratosthenes.
6.	The built-in data set mammals contain data on body weight versus brain weight. Develop

R commands to:

a) Find the Pearson and Spearman correlation coefficients. Are they similar?

b) Plot the data using the plot command.

c) Plot the logarithm (log) of each variable and see if that makes a difference.

7. Develop R program to create a Data Frame with following details and do the following operations.

ItemCode	**ItemCategory**	**ItemPrice**
1001	Electronics	700
1002	Desktop Supplies	300
1003	Office Supplies	350
1004	USB	400
1005	CD Drive	800

a) Subset the Data frame and display the details of only those items whose price is greater than or equal to 350.

b) Subset the Data frame and display only the items where the category is either "Office Supplies" or "Desktop Supplies"

c) Create another Data Frame called "item-details" with three different fields itemCode, ItemQtyonHand and ItemReorderLvl and merge the two frames

8. Let us use the built-in dataset air quality which has Daily air quality measurements in New York, May to September 1973. Develop R program to generate histogram by using appropriate arguments for the following statements.

a) Assigning names, using the air quality data set.

b) Change colors of the Histogram

c) Remove Axis and Add labels to Histogram

d) Change Axis limits of a Histogram

e) Add Density curve to the histogram

9. Design a data frame in R for storing about 20 employee details. Create a CSV file named "input.csv" that defines all the required information about the employee such as id, name, salary, start_date, dept. Import into R and do the following analysis.

a) Find the total number rows & columns

b) Find the maximum salary

c) Retrieve the details of the employee with maximum salary

d) Retrieve all the employees working in the IT Department.

e) Retrieve the employees in the IT Department whose salary is greater than 20000 and write these details into another file "output.csv"

10. Using the built in dataset mtcars which is a popular dataset consisting of the design and fuel consumption patterns of 32 different automobiles. The data was extracted from the 1974 Motor Trend US magazine, and comprises fuel consumption and 10 aspects of automobile design and performance for 32 automobiles (1973-74 models). Format A data frame with 32 observations on 11 variables : [1] mpg Miles/(US) gallon, [2] cyl Number of cylinders [3] disp Displacement (cu.in.), [4] hp Gross horsepower [5] drat Rear axle ratio,[6] wt Weight (lb/1000) [7] qsec 1/4 mile time, [8] vs V/S, [9] am Transmission (0 = automatic, 1 = manual), [10] gear Number of forward gears, [11] carb Number of carburetors

Develop R program, to solve the following:

a) What is the total number of observations and variables in the dataset?

	b) Find the car with the largest hp and the least hp using suitable functions c) Plot histogram / density for each variable and determine whether continuous variables are normally distributed or not. If not, what is their skewness? d) What is the average difference of gross horse power(hp) between automobiles with 3 and 4 number of cylinders(cyl)? Also determine the difference in their standard deviations. e) Which pair of variables has the highest Pearson correlation?
11.	Demonstrate the progression of salary with years of experience using a suitable data set (You can create your own dataset). Plot the graph visualizing the best fit line on the plot of the given data points. Plot a curve of Actual Values vs. Predicted values to show their correlation and performance of the model. Interpret the meaning of the slope and y- intercept of the line with respect to the given data. Implement using lm function. Save the graphs and coefficients in files. Attach the predicted values of salaries as a new column to the original data set and save the data as a new CSV file.
12.	Write R script (a) to read and write excel (b) to read and write csv file. (c) to work with Database file.
13.	Write R script (a) Write R script to create bar chart(3 different styles preferable). (b) Write R script to create Line graph (3 different styles preferable). (c) Write R script to create pie chart(5 different styles preferable). (d) Write R script to create Histogram.

Course Outcomes: After completing the course, the students will be able to	
CO1	Understand the graphical packages of R for effective data visualization.
CO2	Apply various statistical analysis methods for performing data analytics.
CO3	Analyze the structures and components of R programming.
CO4	Evaluate the basics of data preparation using real-world examples.
CO5	Develop data-driven solutions by integrating file handling, data manipulation, and automation techniques in R programming.

Semester: III					
Project Management with Git					
Course Code	:	BAD308C	**Credits**	:	01
Hours/Week(L:T:P)	:	0:0:2	**CIE**	:	50 Marks
Total Hours	:	14 Hrs	**SEE**	:	50 Marks
Course Type	:	AEC	**SEE Duration**	:	2 Hours

Prerequisites:	
Courses	Problem solving through programming, Introduction to python programming.
Knowledge on Fundamental Concepts	File Handling, shell/terminal usage and Basic CLI Navigation.
Knowledge on Connected Tools (If any)	IDLEs

Course Learning Objectives: This course will enable the students to	
CLO1	Understand the fundamental concepts and workflow of version control systems like Git.
CLO2	Apply Git commands to manage code repositories, including staging, committing, branching, and merging.
CLO3	Collaborate effectively using remote repositories by performing cloning, pushing, pulling, and rebasing.
CLO4	Utilize Git tools Such as tagging, stashing, and cherry-picking for advanced version control operations.
CLO5	Analyze and modify Git history for auditing, debugging, or rolling back changes.

Instructions
- Use a test repository to avoid impacting real projects, and perform all tasks in a Terminal or Git Bash environment suited to your operating system.
- Use clear and descriptive commit messages, develop on feature branches, and always fetch or pull updates before pushing to prevent conflicts.

Sl. No	PART-A
1.	**Setting Up and Basic Commands** Initialize a new Git repository in a directory. Create a new file and add it to the staging area and commit the changes with an appropriate commit message.
2.	**Creating and Managing Branches** Create a new branch named "feature-branch." Switch to the "master" branch. Merge the "feature-branch" into "master."
3.	**Creating and Managing Branches** Write the commands to stash your changes, switch branches, and then apply the stashed changes.
4.	**Collaboration and Remote Repositories** Clone a remote Git repository to your local machine by Changing the current working directory.
5.	**Collaboration and Remote Repositories** Fetch the latest changes from a remote repository and rebase your local branch onto

	the updated remote branch by git fetch origin and replacing <branch-name> with the name of your local branch by git checkout <branch-name>Command.
6.	**Collaboration and Remote Repositories** Write the command to merge "feature-branch" into "master" while providing a custom commit message for the merge.
7.	**Git Tags and Releases** Write the command to create a lightweight and annotated Git tag named "v1.0" for a commit in your local repository.
8.	**Advanced Git Operations** Write the command to cherry-pick a range of commits from "source-branch" to the current branch.
9.	**Analysing and Changing Git History** Given a commit ID, how would you use Git to view the details of that specific commit, including the author, date, and commit message.
10.	**Analysing and Changing Git History** Write the command to list all commits made by the author "JohnDoe" between "2025- 01-01" and "2025-12-31."
11.	**Analysing and Changing Git History** Write the command to display the last five commits in the repository's history.
12.	**Analysing and Changing Git History** Write the command to undo the changes introduced by the commit with the ID "abc123"**.**

PART-B
Note: • Ensure Git is installed by running git --version in your terminal. Be aware that newer Git versions use main instead of master as the default branch—adjust commands accordingly. • Use commands like git revert and git reset with caution, as they modify commit history—especially in shared repositories.

Course Outcomes: After completing the course, the students will be able to	
CO1	Identify the steps to initialize a Git repository and the purpose of basic version control commands such as add, commit, and status.
CO2	Illustrate the role of branching and merging strategies in Git during feature development
CO3	Perform Git stash and rebase operations to manage complex workflows and context switching
CO4	Describe how to clone remote repositories, synchronize changes, and collaborate with teams on shared codebases.
CO5	Analyze commit history and make informed decisions to revert, cherry-pick, or annotate changes.

Semester: III					
Data Visualization with Python					
Course Code	:	BCI308D	**Credits**	:	1
Hours/Week(L:T:P)	:	0:0:2	**CIE**	:	50Marks
Total Hours	:	12 Hrs	**SEE**	:	50Marks
Course Type	:	AEC	**SEE Duration**	:	2 Hours

Prerequisites:	
Courses	Introduction to Python Programming
Knowledge on Fundamental Concepts	Basic Python Concepts
Knowledge on Connected Tools (If any)	Jupyter notebook

Course Learning Objectives: This course will enable the students to	
CLO1	Demonstrate the use of IDLE or PyCharm IDE to create Python Applications.
CLO2	Apply a Python programming language to develop programs for solving real-world problems.
CLO3	Implement of Matplotlib for drawing different Plots.
CLO4	Demonstrate working with Seaborn , Bokeh.
CLO5	Working with Plotly for 3D, time series and maps.

Sl.No	**Experiments**
1	a) Design a python program to find the best of two test average marks out of three test's marks accepted from the user. b) Develop a Python program to check whether a given number is palindrome or not also count the number of occurrences of each digit in the input number.
2	Design a function F as Fn = Fn-1 + Fn-2. Develop a Python program which accepts a value for N(where N >0) as input and pass this value to the function. Display suitable error message if the condition for input value is not followed.
3	a) Design a Python program that accepts a sentence and find the number of words, digits, uppercase letters and lowercase letters. b) Design a Python program to find the string similarity between two given strings.
4	Design a Python program which explains uses of customizing Seaborn plots with Aesthetic functions.
5	a) Design a python program to explain working with Bokeh line graph using Annotations and legends. b) Design a python program for plotting different types of plots using Bokeh.
6	Develop a python program to draw 3D Plots using Plotly Libraries.
7	a) Develop a python program to draw Time Series using Plotly Libraries. b) Design a python program for creating maps using Plotly Libraries.

8	For the given dataset that contains immigration details to Canada from 1980 to 2013, • Create an area plot for top 6 immigrant countries from 1990 to 2013. • Create and year-wise immigrant bar chart from India to Canada during the period of 1980 to 2013. • Create a boxplot for Indian, Phillipin and China immigrants. • Show the total no. of immigrants from India and France countries using Area Chart and Pie chart. • Create a scatter Histogram for the immigrants from Fiji and Singapore in the year 2013.
9	For the given data set that contains the data of flights that were on time in January for the years 2019 and 2020. Using the two data sets visualize the data using matplotlib and plotly libraries to depict the following: • Show the difference in statistics for distance for both the years using the appropriate plotting technique. • Visualize the no. of flights whose destination airport id is 11778 and 11267 using a bar plot or bar chart. • Create a Sunburst Plot for both the years depicting the difference among them.
10	Visualize the given Placement Data Full Class dataset that contains details about Campus Recruitment using the below techniques for appropriate dimensions and differentiate between the two techniques: • Histogram and Bar Chart [For histogram let no. of bins = 10]. • Facet Plot and Pair Plot. • Area Chart and Pie Chart [For yes or no data] .

Course Outcomes: After completing the course, the students will be able to	
CO1	The use of IDLE or PyCharm IDE to create Python Applications.
CO2	Implement Matplotlib for drawing different types of plots.
CO3	Build a effective 2D visualizations using Matplotlib.
CO4	Design advanced visualizations using Seaborn and Bokeh .
CO5	Develop interactive and advanced 3D/time-series visualizations using Plotly.

Semester: III						
Environmental Studies **Stream: CSE/ECE/CV/ME**						
Course Code	**:**	**BES309**		**Credits**	**:**	1
Hours/Week(L:T:P)	**:**	1:0:0		**CIE**	**:**	50Marks
Total Hours	**:**	15		**SEE**	**:**	50Marks
Course Type	**:**	MC		**SEE Duration**	**:**	1 Hr

Prerequisites:	
Courses	Basic Science
Knowledge on Fundamental Concepts	Environmental
Knowledge on Connected Tools (If any)	

Course Learning Objectives: This course will enable the students to	
CLO1	Create environmental and sustainability awareness among the students.
CLO2	Creating knowledge of relationship between the biotic and abiotic component
CLO3	Apply their ecological knowledge to illustrate and grasp the problem and describe the realities that managers face when dealing with complex issues.
CLO4	Develop skills, critical thinking and demonstrate socio-economic skills for Environmental protection
CLO5	Gain knowledge on different types of pollution in the environment, waste management and Environmental legislation

Module – 1	**03Hrs**
Ecosystem and Sustainability: Ecology and Ecosystem: Structure of Ecosystem, components, Types: Forest, Desert, Wetlands, River, Oceanic ecosystems. **Sustainability:** 17SDG targets and possible actions. **Biodiversity:** Types, Value; Hot-spots; Threats and Conservation of biodiversity, Forest Wealth, and Deforestation. **Textbook1 – Ch. 1, 2 & 3**	
Module – 2	**03Hrs**
Natural Resource Management **Advances in Energy Systems** (Merits, Demerits, Global Status and Applications): Hydrogen, Solar, OTEC, Tidal and Wind. **Natural Resource Management** (Concept and case-studies): Disaster Management, Sustainable Mining - case studies and Carbon Trading **Textbook2 – Ch. 3 & 4**	

Module – 3	**03Hrs**
Environmental Pollution & Waste Management **Environmental Pollution** (Sources, Impacts, Corrective and Preventive measures, Relevant Environmental Acts, Case-studies): Surface and Ground Water Pollution; Noise pollution; Soil Pollution and Air Pollution. **Waste Management:** Bio-medical Wastes; Solid waste; Hazardous wastes; E-wastes; Industrial and Municipal Sludge. **Textbook2 – Ch. 5 & 16**	
Module – 4	**03 Hrs**
Global Environmental Issues Global Environmental Concerns (Concept, policies and case-studies): Ground water depletion/recharging, Climate Change; Acid Rain; Ozone Depletion; Radon and Fluoride problem in drinking water; Resettlement and rehabilitation of people, Environmental Toxicology. **Textbook3 – Ch. 9 & 10**	
Module – 5	**03 Hrs**
Environmental Legislation: Solid Waste Management Rules 2016, Biomedical Waste Management Rules, 2016. BBMP, BWSSB Norms **Latest Developments in Environmental Pollution Mitigation Tools (Concept and Applications):** GIS & Remote Sensing, Environment Impact Assessment, Environmental Management Systems, ISO14001; Environmental Stewardship- NGOs. **Textbook1 – Ch. 10, 11 & 12**	

Course Outcomes: After completing the course, the students will be able to	
CO1	Understand the principles of ecology and environmental issues that apply to air, land and water issues
CO2	Demonstrate ecology knowledge of a complex relationship between biotic and abiotic components
CO3	Conduct survey to describe the realities of waste management system.
CO4	Identify the major challenges of environmental issues on a global scale
CO5	Apply their environmental legislation to illustrate problems and describe the realities that managers face when dealing with complex issues.

Course Learning Objectives: This course will enable the students to	
CLO1	Understand the community in general in which they work
CLO2	Identify the needs and problems of the community and involve them in problem – solving
CLO3	Develop among themselves a sense of social & civic responsibility & utilize their knowledge in finding practical solutions
CLO4	Develop competence required for group-living and sharing of responsibilities & gain skills in mobilizing community participation to acquire leadership qualities and democratic attitudes.
CLO5	Appraise the importance of ethical issues and team working abilities pertaining to the social services.

Activity– 1	**08 Hrs**
Organic farming, Indian Agriculture (Past, Present and Future) Connectivity for marketing.	
Activity – 2	**08 Hrs**
Waste management– Public, Private and Govt. organization, 5 R's	
Activity – 3	**08 Hrs**
Setting of the information imparting club for women leading to contribution in social and economic issues	

Pedagogy – Guidelines, it may differ depending on local resources available for the study as well as environment and climatic differences, location and time of execution

Sl.	**Topic**	**Group Size**	**Location**	**Activity Execution**	**Reporting**	**Evaluation of the Topic**
1.	Organic farming, Indian Agriculture (Past, Present and Future)	May be individual or team	Farmers land/Villages / roadside / community area/ College campus etc.	Site selection /proper consultation/Continuous monitoring/ Information board	Report should be submitted by individual to the concerned	Evaluation as per the rubrics Of scheme and syllabus by NSS officer

	Connectivity for marketing.				evaluation authority	
2.	Waste management– Public, Private and Govt organization , 5 R's.	May be individual or team	Villages/ City Areas / Grama panchayat/ public associations/ Government Schemes officers/ campus etc.	Site selection /proper consultation/Continuous monitoring/ Information board	Report should be submitted by individual to the concerned evaluation authority	Evaluation as per the rubrics Of scheme and syllabus by NSS officer
3.	Setting of the information imparting club for women leading to contribution in social and economic issues.	May be individual al or team	Women empowerment groups/ Consulting NGOs & Govt. Teams / College campus etc.	Group selection/proper consultation/Continuous monitoring/ Information board	Report should be submitted by individual to the concerned evaluation authority	Evaluation as per the rubrics Of scheme and syllabus by NSS officer

Plan of Action (Execution of Activities for 3rd Semester)

Sl. No.	Practice Session Description
1.	Lecture session by NSS Officer
2.	Selection of topic, Commencement of activity and its progress
3.	Execution of Activity
4.	Case study based Assessment, Individual performance
5.	Sector wise study and its consolidation
6.	Video based seminar for 10 minutes by each student At the end of semester with Report.

- In the 3rd semester, each student should do activities according to the scheme and syllabus.
- At the end of the semester student performance has to be evaluated by the NSS Officer for the assigned activity progress and its completion.
- At the end of the 3rd semester, consolidated report of all activities compiled report should be submitted as per the instructions.

Course Outcomes: After completing the course, the students will be able to	
CO1	Exploit the importance of his / her responsibilities towards society.
CO2	Analyze the environmental and societal problems/issues and will be able to design solutions for the same.
CO3	Evaluate the existing system and to propose practical solutions for the same for sustainable development.
CO4	Implement government or self-driven projects effectively in the field of societal problems.
CO5	Appraise the importance of ethical issues and team working abilities pertaining to the social services.

Assessment Details for CIE (100 Marks)

Weightage	**CIE- 100 Marks**
Selection of Topic, Commencement of activity and its progress	**40 Marks**
Case study based Assessment	**20 Marks**
Sector wise study and its consolidation	**20 Marks**
Video based seminar for 10 minutes by each student at the end of semester with Report	**20 Marks**
Total Marks for the course in the semester	**100 Marks**

Suggested Learning Resources:	
Books:	
1	NSS Course Manual, Published by NSS Cell, VTU Belagavi.
2	Government of Karnataka, NSS cell, activities reports and its manual.
3	Government of India, NSS cell, Activities reports and its manual.

Semester: III						
Physical Education (PE) (Sports & Athletics) Stream: CSE/ECE/ME/CV						
Course Code	**:**	**BPE310**		**Credits**	**:**	0
Hours/Week(L:T:P)	**:**	0:0:1		**CIE**	**:**	**100 Marks**
Total Hours	**:**	24		**SEE**	**:**	**-**
Course Type	**:**	NCMC		**SEE Duration**	**:**	**-**

Course Learning Objectives: This course will enable the students to	
CLO1	Develop awareness about personal health, wellness, and the importance of an active lifestyle through pre-fitness evaluation and orientation.
CLO2	Improve general physical fitness through structured training in strength, speed, and warm-up exercises
CLO3	Acquire sport-specific skills and techniques in traditional games such as Kabaddi or Kho-Kho through practical sessions.

Module – 1	**4 Hrs**
Orientation A. Lifestyle B. Health & Wellness C. Pre-Fitness test.	
Module – 2	**4 Hrs**
General Fitness & Components of Fitness A. Warming up (Free Hand exercises) B. Strength – Push-up / Pull-ups C. Speed – 30 Mtr Dash	
Module-3	**16 Hrs**
Specific games (Any one to be selected by the student) A. Kabaddi – Hand touch, Toe Touch, Thigh Hold, Ankle hold and Bonus. B. Kho-Kho – Giving Kho, Single Chain, Pole dive, Pole turning, 3-6 Up.	

Course Outcomes: After completing the course, the students will be able to	
CO1	Elucidate core concepts of physical education, health, nutrition and fitness for personal well-being
CO2	Demonstrate exercises, sports and practices that enhance physical and mental development
CO3	Apply foundational skills for careers in physical education, sports and fitness

CO4	Participate in sports competitions with discipline, teamwork and sportsmanship
CO5	Promote healthy lifestyles through wellness concepts and traditional/indigenous activities

Scheme and Assessment for auditing the course and Grades:

Sl. No.	Activity	Marks
1.	Participation of student in all the modules	20
2.	Quizzes – 2, each of 15 marks	30
3.	Final presentation / exhibition / Participation in competitions/ practical on specific tasks assigned to the students	50
	Total	**100**

Semester: III						
Yoga **Stream: CSE/ECE/CV/ME**						
Course Code	:	BYO310		**Credits**	:	-
Hours/Week(L:T:P)	:	0:0:2		**CIE**	:	**100 Marks**
Total Hours	:	24 Hrs		**SEE**	:	-
Course Type	:	NCMC		**SEE Duration**	:	-

Course Learning Objectives: This course will enable the students to	
CLO1	Explain the history, various schools of yoga along with its aims, objectives and significance in holistic well-being.
CLO2	Demonstrate basic yoga practices and how to do them safely, clearing up common misunderstandings.
CLO3	Apply suryanamaskara with proper understanding of its structure, significance and health benefits.
CLO4	Describe the types, methods and benefits of various Asanas.
CLO5	Utilize the knowledge of specific asanas regularly to improve physical health and mental well-being.

Module - 1	**02 Hrs**
Introduction to Yoga: Origin, history, and development of Yoga, Meaning and definitions of Yoga, Different schools of Yoga, Aims and objectives of Yoga, Importance of prayer in Yoga practice. **Text Book 1: Ch. 1 (Part 1)**	
Module - 2	**02 Hrs**
Foundations of Yogic Practice: Yogic practices for a common man to promote positive health, Rules to be followed during yogic practices by the practitioner, Misconceptions about Yoga, Difference between yogic and non-yogic practices. **Text Book 1: Ch. 1 (Part 1)**	
Module - 3	**03 Hrs**
Suryanamaskara (Sun Salutation): Prayer and its meaning, Need, Importance and benefits of Suryanamaskara, 12-count structure and practice of 2 rounds. **Text Book 1: Ch. 2 (Part 2)**	
Module - 4	**02 Hrs**
Introduction to Asanas: Asana - Meaning, need, and importance, Classification of Asanas, General technique, precautionary measures, and benefits of each Asana. **Text Book 1: Ch. 1 & 2 (Part 1 & 2)**	

Module - 5	03 Hrs
Types of Asanas and Practice: Sitting Asanas - Padmasana, Vajrasana, Standing Asanas - Vrikshasana, Trikonasana, Prone Lying Asanas - Bhujangasana, Shalabhasana, Supine Lying Asanas - Utthitadvipadasana, Ardhahalasana. **Text Book 1: Ch. 2 (Part 2)**	

Course Outcomes: After completing the course, the students will be able to	
CO1	Summarize the history and major schools of yoga, highlighting their purpose in promoting holistic well-being.
CO2	Demonstrate basic yoga practices with correct techniques, ensuring safety and addressing common misconceptions.
CO3	Apply suryanamaskara sequences with proper understanding of its structure, significance, and health benefits.
CO4	Classify the types, methods, and benefits of various asanas with appropriate examples.
CO5	Adopt the practice of specific asanas into a regular routine to enhance physical health and mental well-being.

Semester: III-VI					
Music Stream: CSE/ECE/CV/ME					
Course Code	:	BMU310/410/510/610	**Credits**	:	0
Hours/Week(L:T:P)	:	0:0:2	**CIE**	:	**100 Marks**
Total Hours	:	26	**SEE**	:	-
Course Type	:	NCMC	**SEE Duration**	:	-

Course Objectives: This course will enable the students to	
1	Understand the foundational concepts of Indian classical music, including the evolution and structure of Shruthi, Nada, Swara, Laya, Raga, Tala and Mela systems.
2	Recognize and describe various types of Carnatic compositions such as Geethe, Jathi, Swara, Swarajathi, Varna, Krithi and Thillana, along with the basics of the notation system.
3	Appreciate the contributions of key composers like Purandaradasa, Thyagaraja and Mysore Vasudevacharya to Indian music and understand their musical legacy.
4	Identify and explain the classification and basic construction of traditional Indian musical instruments, including string, wind, percussion and idiophones, with appropriate examples.
5	Demonstrate basic vocal proficiency through the practice of Sarale Varase exercises, notations for Suladi Sapta Tala in Mayamalavagowla raga and performance of selected compositions such as Geethe, Jathi Swara and Krithi.

Module -I	**03 Hrs**
Preamble Contents of the curriculum intended to promote music as language to develop an analytical, creative and intuitive understanding. For this the student must experience music through study and direct participation in improvisation and composition. Origin of the Indian Music: Evolution of the Indian music system, understanding of Shruthi, Nada, Swara, Laya, Raga, Tala, Mela **Textbook1, V-1 Ch. 1-4**	
Module – II	**03 Hrs**
Compositions Introduction to the types of composition in Carnatic Music – Geethe, Jathi, Swara, Swarajathi, Varna, Krithi and Thillana, Notation System. **Textbook2 – Ch. 4-7**	
Module –III	**03 Hrs**
Composers Biography and contributions of Purandaradasa, Thyagaraja, Mysoro asudevacharya, Kanakadasa **Textbook3 – Ch. 2-5**	

Module –IV	03 Hrs
Music Instruments Classification and construction of string instruments, wind instruments, percussion Instruments, Idiophones (Ghana Vaadya), Examples of each class of instruments. **Textbook1,V-4 – Ch. 2-6**	
Module –V	**14 Hrs**
Abhyasa Gana Singing the swara exercises (Sarale Varase Only), Botatio writing for sarale varase and sulafi sapta tala (Only in mayamalavagowla raga), singing 4 geethe in malahari and one jathi swara, oe krithi in a mela raga **Textbook1, V-1&2**	

Course Outcomes: After completing the course, the students will be able to	
CO1	Outline the evolution of Indian music and key concepts like Shruthi, Swara, Raga and Tala.
CO2	Identify and interpret basic Carnatic compositions using standard notation.
CO3	Summarize the contributions of composers.
CO4	Classify Indian musical instruments and describe their construction and use.
CO5	Demonstrate basic Carnatic vocal skills through selected exercises and compositions.

Text Books

Prerequisites:	
Courses	Fundamentals of Mathematics & English
Knowledge on Fundamental Concepts	Arithmetic operations, fractions, decimals, and elementary algebra. comprehension of basic English
Knowledge on Connected Tools	**NA**

Course Learning Objectives: This course will enable the students to	
CLO1	Gain a strong foundation in aptitude skills such as number systems, percentages, ratio & proportion and interest calculations to improve quantitative reasoning and problem-solving efficiency.
CLO2	Apply Vedic Mathematics techniques and shortcuts for rapid mental calculations, leading to increased accuracy and speed in aptitude-based assessments.
CLO3	Master logical reasoning topics like syllogisms, blood relations, puzzles and seating arrangements to develop structured thinking and effective decision-making skills.
CLO4	Understand and solve problems involving coding-decoding, visual sequences, clocks, calendars and analogies to enhance pattern recognition and reasoning speed.
CLO5	Utilize aptitude and reasoning skills to perform well in competitive exams, campus placements, and workplace situations, contributing to overall academic and professional success.

Module – 1	**8 Hrs**
Introduction to Aptitude and Vedic Mathematics **Understanding Aptitude** Overview of aptitude skills and their significance in problem-solving and decision- making. Types of aptitude skills commonly assessed in competitive exams and professional settings. **Vedic Mathematics Techniques** Introduction to Vedic Mathematics for faster and more efficient calculations. Key techniques and shortcuts to improve speed and accuracy in quantitative problems. **Importance of Aptitude Skills** The role of aptitude in career development and academic success. How strong aptitude	

skills enhance analytical thinking, logical reasoning, and performance in assessments.

Number System

Divisibility & Remainder, Multiples & Factors, Integers, LCM & HCF, Complete a number Series, Find the Missing Term and Wrong Term, Simplification, BODMAS Rule, Approximation, Decimals, Fractions, Surds & Indices

Textbook-1,Ch1-11

Module – 2	8 Hrs

Percentage

Calculation-oriented basic percentage, Successive Selling type, Discount & MP, Dishonest Dealings

Profit and Loss

Cost Price (CP), Selling Price (SP), Marked Price (MP) / List Price, Discount, Profit (Gain), Loss, Profit Percentage, Loss Percentage, Discount Percentage, Relationship between CP, SP, and Profit/Loss Percentage, Successive Profits and Losses, False Weights and Dishonest Dealer Problems

Blood Relation

Basic Family Relationships (Parent, Sibling, Child, etc.), Direct Relationship Questions, Pointing or Introducing Type Questions, Family Tree/Hierarchical Relationship Questions, Coded Blood Relations, Puzzle-Based Blood Relations, Mixed/Complex Blood Relations, Single-Person Blood Relation Problems, Generational Relationships (Grandparent, Great-Grandparent, etc.), Relationships by Marriage (In-laws, Step-relations)

Textbook-3-Ch2,3,4,6,7,10,12

Module-3	8 Hrs

Simple and Compound Interest

Definition of Simple Interest (SI), Calculation of Simple Interest, Principal, Rate, and Time, Amount in Simple Interest, Problems on SI (Direct, Inverse and Combined), Definition of Compound Interest (CI), Calculation of Compound Interest (Annual, Half- yearly, Quarterly, etc.), Difference between Simple and Compound Interest, Growth Factor and Compound Amount, Compound Interest for Fractional Years, Comparing SI and CI over Multiple Years, Depreciation and Appreciation Problems, Installment Payments (EMI-based Questions).

Averages

Definition and Formula of Average, Average of Numbers, Average of Consecutive Numbers, Average of Odd/Even Numbers, Weighted Average, Average in Groups (Merging and Replacement), Effect of Addition/Removal/Replacement on Average, Average Speed, Change in Average Due to Error (Wrong Entry), Shortcut Tricks and Applications

Direction Sense Test

Cardinal and intermediate directions, right and left directional movement, reference points and orientation, turns and angle-based movement, distance and displacement calculation, shadow and sun-based direction problems, shortest path and final position, direction sense using maps or diagrams, coded direction sense problems, complex/multiple person direction scenarios, error spotting in direction sense.

Textbook 1-Ch2,5

Module-4	8 Hrs

Ratio and Proportion and Variations

Definition of Ratio, Types of Ratio (Simple, Compound, Duplicate, Sub-duplicate, Triplicate), Properties of Ratio, Comparison of Ratios, Definition of Proportion, Types of Proportion (Direct, Inverse, Continued), Properties of Proportion, Mean Proportion, Fourth Proportion, Third Proportion, Relationship between Ratios and Proportions, Componendo and Dividendo Rules, Addendo and Subtrahendo, Applications of Ratio and Proportion in Problem, Direct Variation, Inverse Variation, Joint Variation, Combined Variation, Proportionality Constants, Word Problems on Variation, Application-based Variation Problems, Miscellaneous and Complex Variation Questions **Alligations and Mixtures**

Definition of Alligation, Alligation Rule and Formula, Types of Mixtures (Simple and Compound), Problems on Mixing Two or More Quantities, Mean Price Calculation, Replacement of Quantities, Alligation on Solutions with Different Concentrations, Solving Alligation Questions Involving Profit and Loss, Application-Based Mixture Problems.

Series

Arithmetic Series, Geometric Series, Square Series, Cube Series, Fibonacci Series, Prime Number Series, Alternating Series, Factorial Series, Mixed Series, Exponential/Power Series

Textbook-1,Ch12,13&16

Module-5	8 Hrs

Articles and Prepositions

Usage of articles (a, an, the), definite and indefinite articles, zero article usage, prepositions of time, place, direction, phrasal verbs, prepositional phrases, and error spotting.

Tenses and Subject-Verb Agreement

Present, past, and future tense forms, auxiliary verbs, rules of agreement with different subjects, and error spotting

Change of Voice and Speech

Active-passive transformations in all tenses, direct and indirect speech conversions, and related pronoun, tense, and time changes

Error Spotting and Sentence Correction

Identifying common grammatical errors such as incorrect word usage, faulty subject-verb agreement, tense errors, sentence fragments, and contextual sentence corrections

Synonyms, Antonyms, and Verbal Analogy

Finding words with similar or opposite meanings, commonly confused words, verbal analogies, and contextual vocabulary usage

Sentence Completion and One-Word Substitution

Choosing appropriate words or phrases to complete sentences, idiomatic expressions, logical sentence completion, and replacing phrases with single-word substitutes

Textbook-1,Ch14,15,17&29

Course Outcomes: After completing the course, the students will be able to	
CO1	Solve numerical problems using Vedic Math and number systems to boost speed and accuracy.
CO2	Apply logical reasoning to puzzles, syllogisms, seating and classification problems.
CO3	Develop letter, number and symbol patterns and solve visual reasoning tasks.
CO4	Accurately solve problems on percentages, profit-loss, interest, ratios and partnerships.
CO5	Utilize aptitude and reasoning skills to excel in competitive exams and improve employability.

Institute Vision

Preparing Competent Engineering and Management Professionals to Serve the Society

Institute Mission

- Providing Students with a Sound Knowledge in Fundamentals of their branch of Study.
- Promoting Excellence in Teaching, Training, Research and Consultancy.
- Exposing Students to Emerging Frontiers in various domains enabling Continuous Learning.
- Developing Entrepreneurial acumen to venture into Innovative areas.
- Imparting Value based Professional Education with a sense of Social Responsibility.

Department Vision

Nurturing AI & DS Technocrats to be proficient in solving real-world problems.

Department Mission

- Providing Fundamental to enhance niche expertise in AI & DS, cognitive computing, robotics and neural network architectures.
- Enhancing the analytical and problem-solving abilities to meet the challenges of the future.
- Training the students with the latest technology to become sustainable professionals.
- Fostering a culture of collaboration and propagating industry-oriented innovations and research.
- Establishing a stimulating learning environment to create value-based and pioneering professional.
